Fixture
Lumens**

**Easy
Install**

**Ultra
Reliable**

**Universal
Compatibility**

The Pro-Series to Explore Upgrade Kit has been designed specifically to allow Pro-Series owners to upgrade their existing underwater lighting solution to the latest Explore Series of underwater lights, without the need to re-glass or drill any new holes. The plug-n-play upgrade kit fits directly to the existing cutouts, allowing the Explore Series lights to be installed easily and quickly. The upgrade kit can also be used with third party flush mount style underwater lights, where the hole cutouts are between 3.54 and 4.7 inches (90mm - 120mm), making it a truly universal solution.

COST EFFECTIVE - NO RE-GLASS REQUIRED

The Pro-Series to Explore Upgrade Kit represents an incredibly cost-effective upgrade solution. By removing the need to re-glass the hull, the boat owner can save significant amounts of time and money during any upgrade. The clever upgrade kit integrates itself with the Explore XFM light, then bonds to the hull, just as a light would, no special tools required.

FUTURE PROOFED SOLUTION

Once installed alongside the Explore E3, E6 or E7 underwater lights, the vessel benefits from a future proofed design. Light maintenance and replacement is easy, thanks to convenient rear access and in-water cartridge replacement. The Explore housing remains in place, allowing use by multiple light cartridges over time.

EASY INSTALLATION

The easy-to-use Pro-Series to Explore Upgrade kit bonds directly to the hull in the same way as your underwater light. The clever mounting plate allows Explore XFM lights to be mounted as it would normally. Installation is easy, quick and can be performed by any competent installer.

EXCEPTIONAL VERSATILITY

The one-of-a-kind upgrade kit is suitable for use where the existing light cutout is between 3.54 and 4.7 inches (90mm-120mm). The underwater lights being removed can be made by any third-party brand, the upgrade kit allows them to be replaced with OceanLED Explore Series lights. The owner or installer is then able to avoid re-glass charges or drilling new holes by upgrading.

SUPERCHARGED PERFORMANCE

Upgrading to the Explore Series offers significant performance gains, both in lighting effect and power efficiency. The Explore E6 is an incredible 22% brighter than the equivalent Pro-Series light.

UNRIVALLED QUALITY

At OceanLED we understand quality and reliability are paramount for our customers. With this in mind, the Pro-Series to Explore Upgrade Kit has been designed to the highest possible standards, using marine grade aluminium bronze. The robust design has been rigorously tested, ensuring longevity and performance.

COMPATIBILITY

Existing Hole Cutout	
Min Hole Cutout:	90mm (3.57")
Max Hole Cutout:	120mm (4.72")

Maximum Hull Thickness	
Hull Thickness (Standard):	46mm (2.16")
Hull Thickness (With Extension Kit):	110mm (4.7")

TECHNICAL INFORMATION

Outer Diameter:	170mm (6.69")
Material:	Aluminum Bronze

COMPATIBLE PRODUCTS:

ITEM: **EXPLORE E3 XFM ULTRA WHITE**

Part: E3009W

ITEM: **EXPLORE E3 XFM MIDNIGHT BLUE**

Part: E3009B

ITEM: **EXPLORE E3 XFM DUAL WHITE/BLUE**

Part: E3009BW

ITEM: **EXPLORE E3 XFM COLOURS DMX**

Part: E3009CD

ITEM: **EXPLORE E6 XFM ULTRA WHITE**

Part: E6009W

ITEM: **EXPLORE E6 XFM MIDNIGHT BLUE**

Part: E6009B
